![OrderPoint - Mobility for Infor Distribution]

VERSATILE MOBILE ORDERING FOR YOUR SALES TEAM

Take Your ERP Mobile

OrderPoint Version 2.0 is a robust, full-featured mobile ordering application for Infor Distribution SX.e.

Now you can drive more sales while improving your customer's experience with OrderPoint. This iPad™ based application equips your sales reps with real-time access to essential information that dramatically improves productivity on-the-go.

When connected, all information is processed in real-time. When offline, orders are validated against a local database on the iPad, stored and then processed and submitted when reconnected. OrderPoint also works great as a mobile point of sale (POS) system.

Designed to enable convenient and real-time mobile access to your Infor ERP, OrderPoint is an ideal solution for sales reps that travel frequently. With OrderPoint, your sales team can be armed with the latest tools to improve their productivity and provide better, faster service to your customers. Intuitive and easy-to-use, OrderPoint is an innovative solution to take your ERP mobile.

OrderPoint is built using Infor's innovative technology platform including Mongoose and ION. This approach assures that OrderPoint has forward compatibility with a range of Infor products. OrderPoint is sold exclusively through Infor and certified Infor Channel Partners.

## Enable Your Sales Team to Use a Tablet to Optimize Business

When a sales rep is in front of a customer to close a deal, they need real-time, mobile access to the full range of account and business information that resides within your ERP software. From inventory availability and pricing models, to credit status and past order history, OrderPoint gives your sales reps the key information wherever they are, which can make the difference between closing or losing a sale.

OrderPoint enables your sales reps to:

- Check inventory availability
- Look up pricing and run comparisons
- Check a customer's credit status
- Look up their past order history
- Place orders
- Leave the desk behind and get more done on-the-go

OrderPoint Version 2.0 Delivers Mobility to Infor SX.e

Order Inquiry

The order inquiry screen provides a powerful tool to find invoices and open orders by customer, by dates, and by product.

Customer Credit

The customer credit screen gives you a snapshot of their credit history and their accounts receivable aging. The user can drill into the aging to see the documents in question.
